Openings: POSTDOCTORAL ASSOCIATES

We are looking for two postdoctoral associates to join us in the Computer Science and Artificial Intelligence Laboratory (CSAIL) in the recently-launched MIT Internet Policy Research Initiative examining issues related to cybersecurity, privacy, advanced networks and the Internet experience.

The Internet and its interconnected high-speed networks are increasingly a core economic and social platform for the economy. The MIT Internet Policy Research Initiative works with policy makers and technologists to increase the trustworthiness and effectiveness of interconnected digital systems. Our team is looking for two postdoctoral associates who can help advance our mission by undertaking research that will help inform and shape public policy around the world. We believe that public policy decisions are best addressed through an interdisciplinary approach, so we welcome applications from PhDs with technical, scientific, legal or social science backgrounds.

Job Requirements

REQUIRED: Ph.D. in a technical, scientific or social science discipline. Candidates can come from any of the backgrounds but should be able to demonstrate that they are comfortable bridging the gap between the information technology and public policy realms. Applicants should be comfortable formulating research ideas, undertaking research and shaping it into policy recommendations. We are a diverse group in a fast-moving field so we look for people with excellent documentation, planning, and interpersonal skills who have the ability to work independently and as part of a multidisciplinary team.

Previous experience with public policy is a plus.

We are an Equal Opportunity Employer and do not discriminate against applicants due to race, color, religion, sex, sexual orientation, gender identity, national origin, veteran status, or disability.
